

Alliance for a Clean and Green Oregon

Endorsement Form

We call for common-sense chemical policies to ensure that only the safest chemicals are used in Oregon.

The **Alliance for a Clean and Green Oregon** has been launched to provide a forum for businesses, organizations, local government leaders and other influential Oregonians to demonstrate our political resolve to make progress on chemical policy reform. As coalition partners, we will act in our communities to hold our state leaders to their commitments to reduce the burden of toxic chemicals in our environment and our bodies.

We support *A Call for Safer Chemicals to Protect our Health and Environment*. This new approach will:

1. Provide complete information on chemical ingredients and their toxicity
2. Categorize chemicals into levels of concern
3. Manage chemicals based on hazards and substitute those of highest concern with safer alternatives
4. Establish tools to move Oregon toward a healthier environment
5. Ensure that workers and impacted communities are protected.
6. Provide adequate funding and enforcement

To join **Clean and Green Oregon** and endorse the above platform, please fill out the form below and send to the address on the reverse:

Name/Title:

We call for common-sense chemical policies to ensure that only the safest chemicals are used in Oregon. Why?

Every Oregonian is accumulating a body burden of toxic chemicals associated with health impacts. We lack complete toxicological health and safety data on most chemicals bought and sold in our economy.

We understand:

- *Everyone has a right to live in a safe and healthy environment, without exposures to toxic chemicals that threaten development and long-term health;*
- *Oregon needs a healthy environment with thriving wildlife and clean air, water, soil, and food for all;*
- *Some populations are more vulnerable to chemical exposures – including pregnant women, infants, children, and workers;*
- *Safe and clean design of chemicals, materials, and products is good for businesses, workers, communities, and ecosystems; and*
- *Using chemicals wisely will ensure a healthy Oregon for future generations.*
